RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 100 pages. Original publisher: Cincinnati, OH: National Risk Management Research Laboratory, Office of Research and Development, U. S. Environmental Protection Agency, 2006 OCLC Number: (OCoLC)184841259 Subject: Nature -- Effect of human beings on. Excerpt: . . . bar on sustainability by a cyclical process of continually increasing its needs through population growth made possible by food surpluses brought about by manipulation of the food web. Model Overview The model ( Figure 1-2 ) was developed in stages. The process began by establishing a basic ecological model with the total mass distributed among all compartments within a foodweb ( Fath et al. 2003 ). The compartments were then differentiated in terms of human control over them by identifying species as being either domesticated or non-domesticated, assigning property rights to each compartment, and indicating intentional changes to the natural flows of mass, such as fences. Finally, a generic industrial process was added to account for resources diverted to human ( non-food ) consumption and use ( Cabezas et al. 2005 ). Resource Pool P3 P2 P1 H3 H2 H1 C2 C1 IS HH Inaccessible Resource Pool Figure 1-2 Integrated model showing flows of mass between compartments and property types. P1, H1, and IS are private property. P2 is state-owned property, but H1 has access to it through grazing leases issued by the government. C1 is a protected species, thus, H1 s access to it is limited. P3, H2, H3, C2 are open-access commons to which no property rights attach. The resource pool in this-model is open-access commons. Dotted lines indicate mass flows that occur under anthropogenic influence. Gray lines from the inaccessible resource pool to P2 and P3 indicate slow transfers of mass-as a result of bacterial decay (...)
